Supervisory Patent Examiner, Art Unit 2625

The following is an examiner's statement of reasons for allowance:

Renumbered as claims 1-10 for pending claims 23-32.

Claims 23-24 of the current application are allowed for the reason of none of prior art of record teaches nor suggests "shifting said R digital data value to the left by one digital place value, producing a R intermediate digital data value; shifting said G digital data value to the left by two digital place values, producing a G intermediate digital data value; adding said R intermediate digital data value to said B digital value, producing a first intermediate value; adding G digital value to said G intermediate digital data value, producing a second intermediate value; adding said first intermediate value to said second intermediate value, producing a third intermediate value; and shifting said third intermediate value by three digital place values, producing said luminance value."

Claims 25-28 of the current application are allowed for the reason of none of prior art of record teaches nor suggests "calculating a luminance value from said input image data, producing a Y digital value; calculating intermediate values $x = \text{absolute values of } B-Y$ and $y = \text{absolute value of } R-Y$; swapping intermediate values x and y if $y > x$; dividing y by x ; accessing an action look-up table to provide correction bits for performing calculations within the first subset of hue angle space; and accessing an arctangent look-up table, said arctangent table producing an intermediate hue angle value."

Claims 29-32 of the current application are allowed for the reason of none of prior art of record teaches nor suggests "calculating the hue angle of said RGB input image data; selecting the chromaticity triangle of said RGB input image data based upon said

hue angle, said chromaticity triangles being selected from one of a group, said group comprising RGW, GBW and BRW; selecting a multi-primary matrix based upon said chromaticity triangle; multiplying said multi-primary matrix to said RGB input image data to produce an intermediate RGBW image data value; and wherein further said multi-primary matrix being selected from one of a group, said group comprising:

168	0	-40	128	0	0	168	-40	0
0	168	-40	-40	168	0	0	128	0
0	0	128	-40	0	168	and 0	-40	168."

The closest prior art Ben-Chorin et al. (US 2005/0031199), discloses a method and system for converting color image data for display devices, either singularly or in combination with other cited reference obvious fails to anticipate or render the above limitations.
